SHIFAN HIRANI

Dallas, TX | shifan.hirani@gmail.com | linkedin.com/in/shifanhirani | github.com/hirashif | shifan.me

SUMMARY

Software engineer who builds the internal tools and AI workflows that business teams run on. Spent two years at Paycom on the CRM behind its sales, service, and tax teams, shipping event-driven tasking that cut rep response times ~30% and a tax dashboard that cut filing prep ~40%. Builds with AI coding agents daily and published an open-source CLI that benchmarks them on real GitHub issues.

EXPERIENCE

Paycom | Software Engineer II, CRM Team | Irving, TX *Sept 2024 - May 2026*

- Built event-driven tasking and notifications across several microservices that alerted the assigned rep the moment a key contact left a client account and created the follow-up task, cutting response times ~30%
- Extended CRM tasking with custom feedback and integrated Jira, Outlook, Zoom, Splunk, and Kafka into the workflow, improving task reliability ~15%
- Built a Tax Information dashboard in React, backed by PHP and C# services that synced client-system data overnight, cutting the Tax team's research and filing prep ~40% and ending the manual lookups
- Ran CRM initiatives end to end after the product team was cut: gathered requirements directly from sales, service, and tax stakeholders, wrote the technical specs, and shipped the features
- Stabilized a data-sync process that hung under tens of thousands of requests/min by batching the load; onboarded junior engineers and worked live incident response in Splunk

Resi Media | Software Engineer Intern | Allen & Plano, TX *Summers 2022 & 2023*

- Built and optimized backend APIs serving 5,000+ customers, enhancing the RSP-to-RTMP live-streaming pipeline (YouTube, Twitch) and clearing ~20% of the Media team's backlog
- Cut database query times ~25% by adding Redis caching for media metadata; reached 85% unit-test coverage (JUnit 5, Mockito)

PROJECTS

Gridloom | TypeScript, React, LLM APIs (open source, MIT) *2026*

github.com/hirashif/gridloom | gridloom.app

- Shipped an AI image studio that runs one prompt across 13 models side by side; keys never leave the browser

Bakeoff | TypeScript, Node.js, AI coding agents (open source, MIT) *2026*

github.com/bakeoff-dev/bakeoff | npm: bakeoff-cli

- Built a CLI that races AI coding agents on one GitHub issue and scores their pull requests on hidden acceptance tests; on a 10-issue post-cutoff benchmark, Gemini CLI matched Claude Code's 10/10 for under 1/3 the cost
- Built it by directing parallel coding agents under file-ownership rules and review gates: 28 merged PRs, 372 tests

Outbound System | Python, job-board APIs, Hunter, Apollo, LLMs *2026*

shifan.me/outbound

- Built the outbound system behind my own job search: job-board API scrapers, requirement filters, Hunter and Apollo lookups, and an AI-writing check; 35 cold emails to founders and CTOs got 5 replies and 4 calls

EDUCATION

Texas A&M University | B.S. Computer Science (Business Concentration) *May 2024*

GPA 3.63 - Distinguished Student (3 semesters) - Capstone with L3Harris: post-quantum crypto library in Go (qs509)

Relevant coursework: Data Structures & Algorithms, Operating Systems, Database Systems, The Bitcoin Protocol

SKILLS

Languages: Python, JavaScript/TypeScript, SQL, Java, PHP, C#, Go

Systems & Integrations: CRM development, REST APIs, event-driven automation (Kafka), Jira, Outlook, Zoom, Splunk, PostgreSQL

AI & Automation: LLM app development (OpenAI and other model APIs), n8n workflow automation, agentic coding tools (Claude Code, Cursor, Codex), outbound tooling (Apollo, Hunter)

Tools & Infra: React, Docker, Kubernetes, Azure (AKS), Terraform, CI/CD (GitHub Actions, GitLab), Grafana

Work Authorization: U.S. citizen
